attimer If you don't want to go through the hassle of getting the VRAY API, you can also use the blender\_compositor wrapper ( A: Go to your blender preferences. Go to the User Preferences > Addons > User Startup Add this line in the box: import bpy bpy.ops.render.compositor\_mode() This will enable VRay in Blender Render. Q: Counting Number of Uncountable Sets I'm pretty sure this is true, but is there a simple proof? Let  $SUS$  be the collection of all uncountable subsets of  $S_{\text{mathbb{R}}}$ . Let  $SBS$  be the collection of all subsets of  $S_{\text{mathbb{R}}}$  which are not countable. For any set  $SAS$ , there is exactly one bijection  $SIS$  from  $SAS$  to the set of subsets of  $SAS$ . This is because for each function  $gS$ ,  $Sf(A)=g(A)S$  would contradict  $SAS$  being uncountable. Let  $SBS$  be the set of all subsets of  $S_{\text{mathbb{R}}}$  which are not countable, then there is a bijection  $SIS$  from  $SBS$  to  $SUS$ . But since we are mapping to uncountable sets, this means that  $SIB=UIS$  is not a cardinal number. the way you are. "I wish I could find the one who could make me crazy in the way I have become. But I am only the one who watches. "But I believe you are the one who watches. Sam. I can tell. You are my son, you are after all my son, and I know you. I can tell by your dreams. But what do you want of me? What do you want of me? "Can't you see it? Can't you see it? And there are reasons. There are reasons! For a man like me to love you, to want to love you, to want to have you to love me—there are reasons!" "I want to go back to when 82157476af
